

KoKo Spirometer

The KoKo Spirometer is the most accurate and sophisticated spirometer available in today's market. It combines high performance with speed and simplicity of use

The KoKo Spirometer features a brass Fleisch pneumotach, long acclaimed by clinical researchers for its accuracy and durability.

Independent validation shows that the KoKo Spirometer exceeds ATS 1994 recommendations for ambient and BTPS conditioned air.

KoKo PFT Software

The KoKo Spirometer uses the most comprehensive spirometry software available, allowing SVC, FVC, pre/post and MVV testing. Provocation testing is also possible using the Challenge Testing programme. Testing allows clear on-screen viewing of results and comparison with predicted and reference tests. Many standard report formats are included and these can be fully customised by users. Reports can be emailed if required

FEATURES:

- Easy to use with on-screen help facility
- Side-by-side, real-time Flow/Volume loop and Volume/Time graphics
- Fully customisable reporting, predicted values, graphics formats, automated interpretation and challenge protocols
- Four incentive programmes for patient coaching
- Pre-post bronchodilator testing
- Trend analysis of patient results
- Challenge testing is also possible when used in conjunction with the KoKo Dosimeter or the KoKo Digidoser
- Single or multi-user capability
- Compatible with all recent Windows operating systems including 2000 and XP versions
